

Welcome to the *Next Era* of Data Management

Collaborate

Data isn't just IT's job—teams must seamlessly collaborate across domains, regions and functions

Automate

Increase your DataOps teams' productivity and scale with AI agents & workflow automations

Accelerate

Your business can't wait – deploy and iterate quickly to deliver impact in weeks, not years

Foundations for the New Data Operating Model

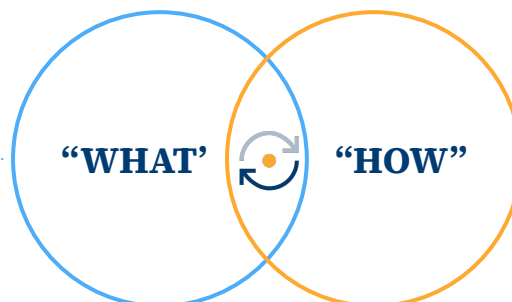

decrease in **centralized** data architectures (warehouse, lake)

increase in **federated** data architectures (mesh + fabric)

The New Data Operating Model

We're moving from centralized to federated architectures to drive more business value. Adoption of data products (“**what** to deliver”) is growing, but most haven't fully embraced DataOps best practices (“**how** to deliver”). The next era leaders will adopt both—using Agentic AI tools—to deliver faster, higher-quality outcomes and lasting advantage.

Semarchy Data Platform (SDP): The Modern, AI-Driven MDM Platform Built for DataOps

Built for Modern DataOps Ecosystems

Embedded in tools your teams trust (VS Code, Git, CI/CD) = better collaboration, increased productivity

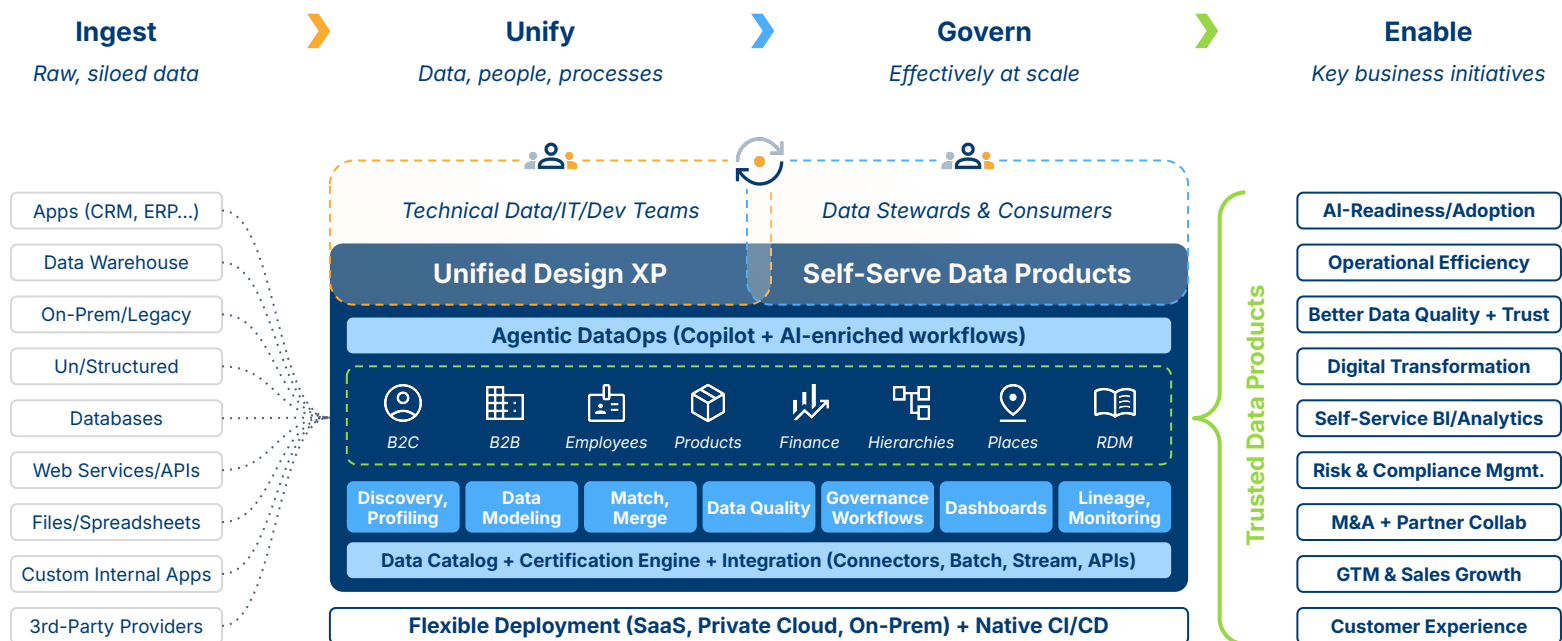

Self-Service BI and Governance at Scale

Enable a data-driven culture, improve quality and speed to insight with less IT overhead

Flexible, AI + Human Data Workflows/Tasks

Seamlessly automate data engineering and stewardship with AI agents and human-in-loop

Trust your data & enable your business *faster*

See why 400+ global organizations trust Semarchy

100%

Customers met their implementation goals in last the 24 months

<12 weeks

Deliver first solution to stakeholders and reduce adoption time by 50%

+315%

ROI over 3 years based on latest Forrester TEI study for Semarchy

4.8/5

Support rating on Gartner, the highest in market with the most 5-star reviews

Solve Key Data, Operational & AI Challenges

We help you establish a strong, unified foundation of trust. Then scale that value, *fast*.

Trust

Remove silos, align business and IT teams with MDM, DQ rules and governance flows

Scale

Modernize data + AI delivery with DataOps and self-serve data products across the org

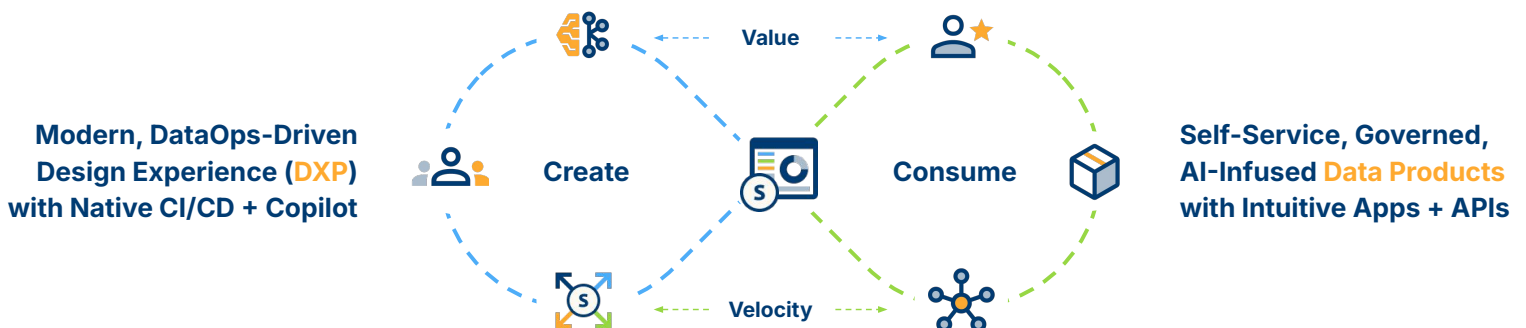

Velocity

Accelerate with Agentic, human-in-loop workflows in our flexible, open ecosystem

The Modern, AI-Driven MDM Platform, Built for DataOps

Master, govern and share trusted AI-ready data across the enterprise with data products

Only SDP Enables

Collaboration

Real-time, parallel delivery across the enterprise with granular design & controls

Automation

Native, Copilot-driven data engineering; embed any LLM in your data workflows

Acceleration

No friction from adoption to production with standard DataOps tools & processes

Flexibility

Deploy & scale anywhere (SaaS, on-prem, cloud) with full compatibility, no lock-in
