#GartnerDA

Traditional MDM & Governance has failed in the enterprise

Although they are crucial business requirements

IT Focused

No business adoption
Deep technical expertise

Rigid

Inflexible modeling
Dictatorial governance

Expensive

Questionable ROI
Big bang approach

Data Management Capabilities and over-segmentation

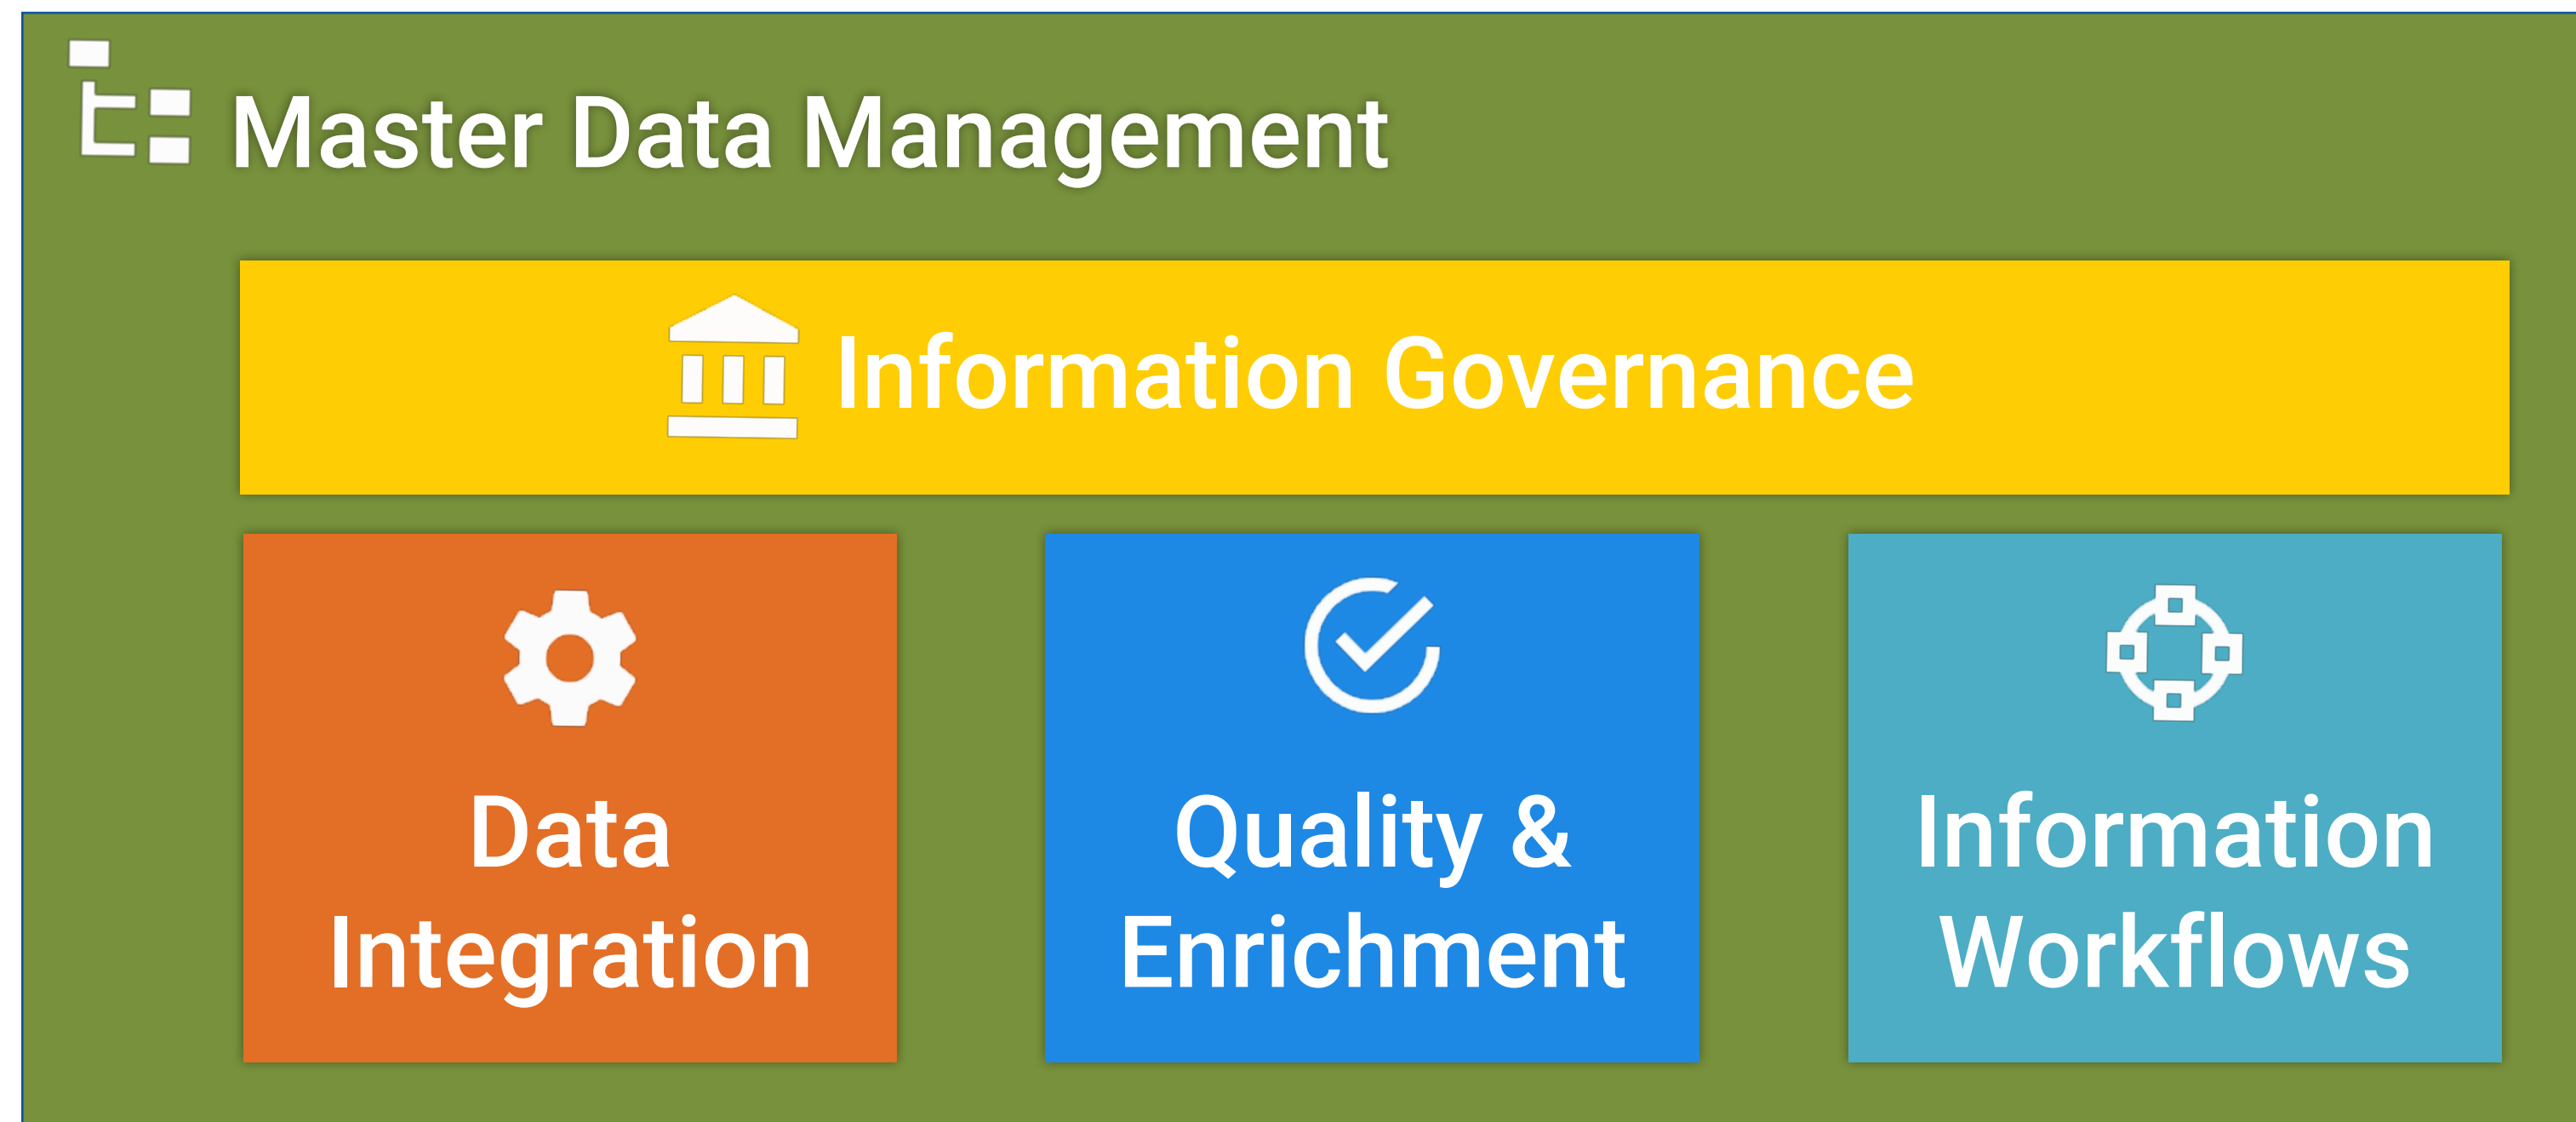

Just because each discipline has a magic quadrant, doesn't mean you need one

- Thinking of all these as separate disciplines may seem like “best practice”
- In actuality, time lost on integration leads to project fatigue
- Lack of measurable ROI

Tackling the issue in parallel

Some analysts starting to refer to this as “Application Data Management”

 Compound Hub Styles

 Hybrid, Multi-Vector MDM

 Operational & Analytical

 Open App Integration

 Empower Data Champions

The Chipotle Story: Instructive Vignettes

Nearest Chipotle

You can't get there from here -- precision

Carnitas Shortage

The Stata story behind "The Great Carnitas Shortage of 2015"

Skip the Line

Skip the line every time, what you can learn from Chipotle

Wrap

Conclusions and best practices, wrapped up like a tasty burrito

Jeffrey Cox

Lead Technical Architect

Master Your Core

Introduction

Where to Get Started: Master Your Core

How do you eat an elephant?
Avoiding the “big bang” approach

Drive Maturity
Company level > Department > Process

Build Data Champions
Focus on key business users

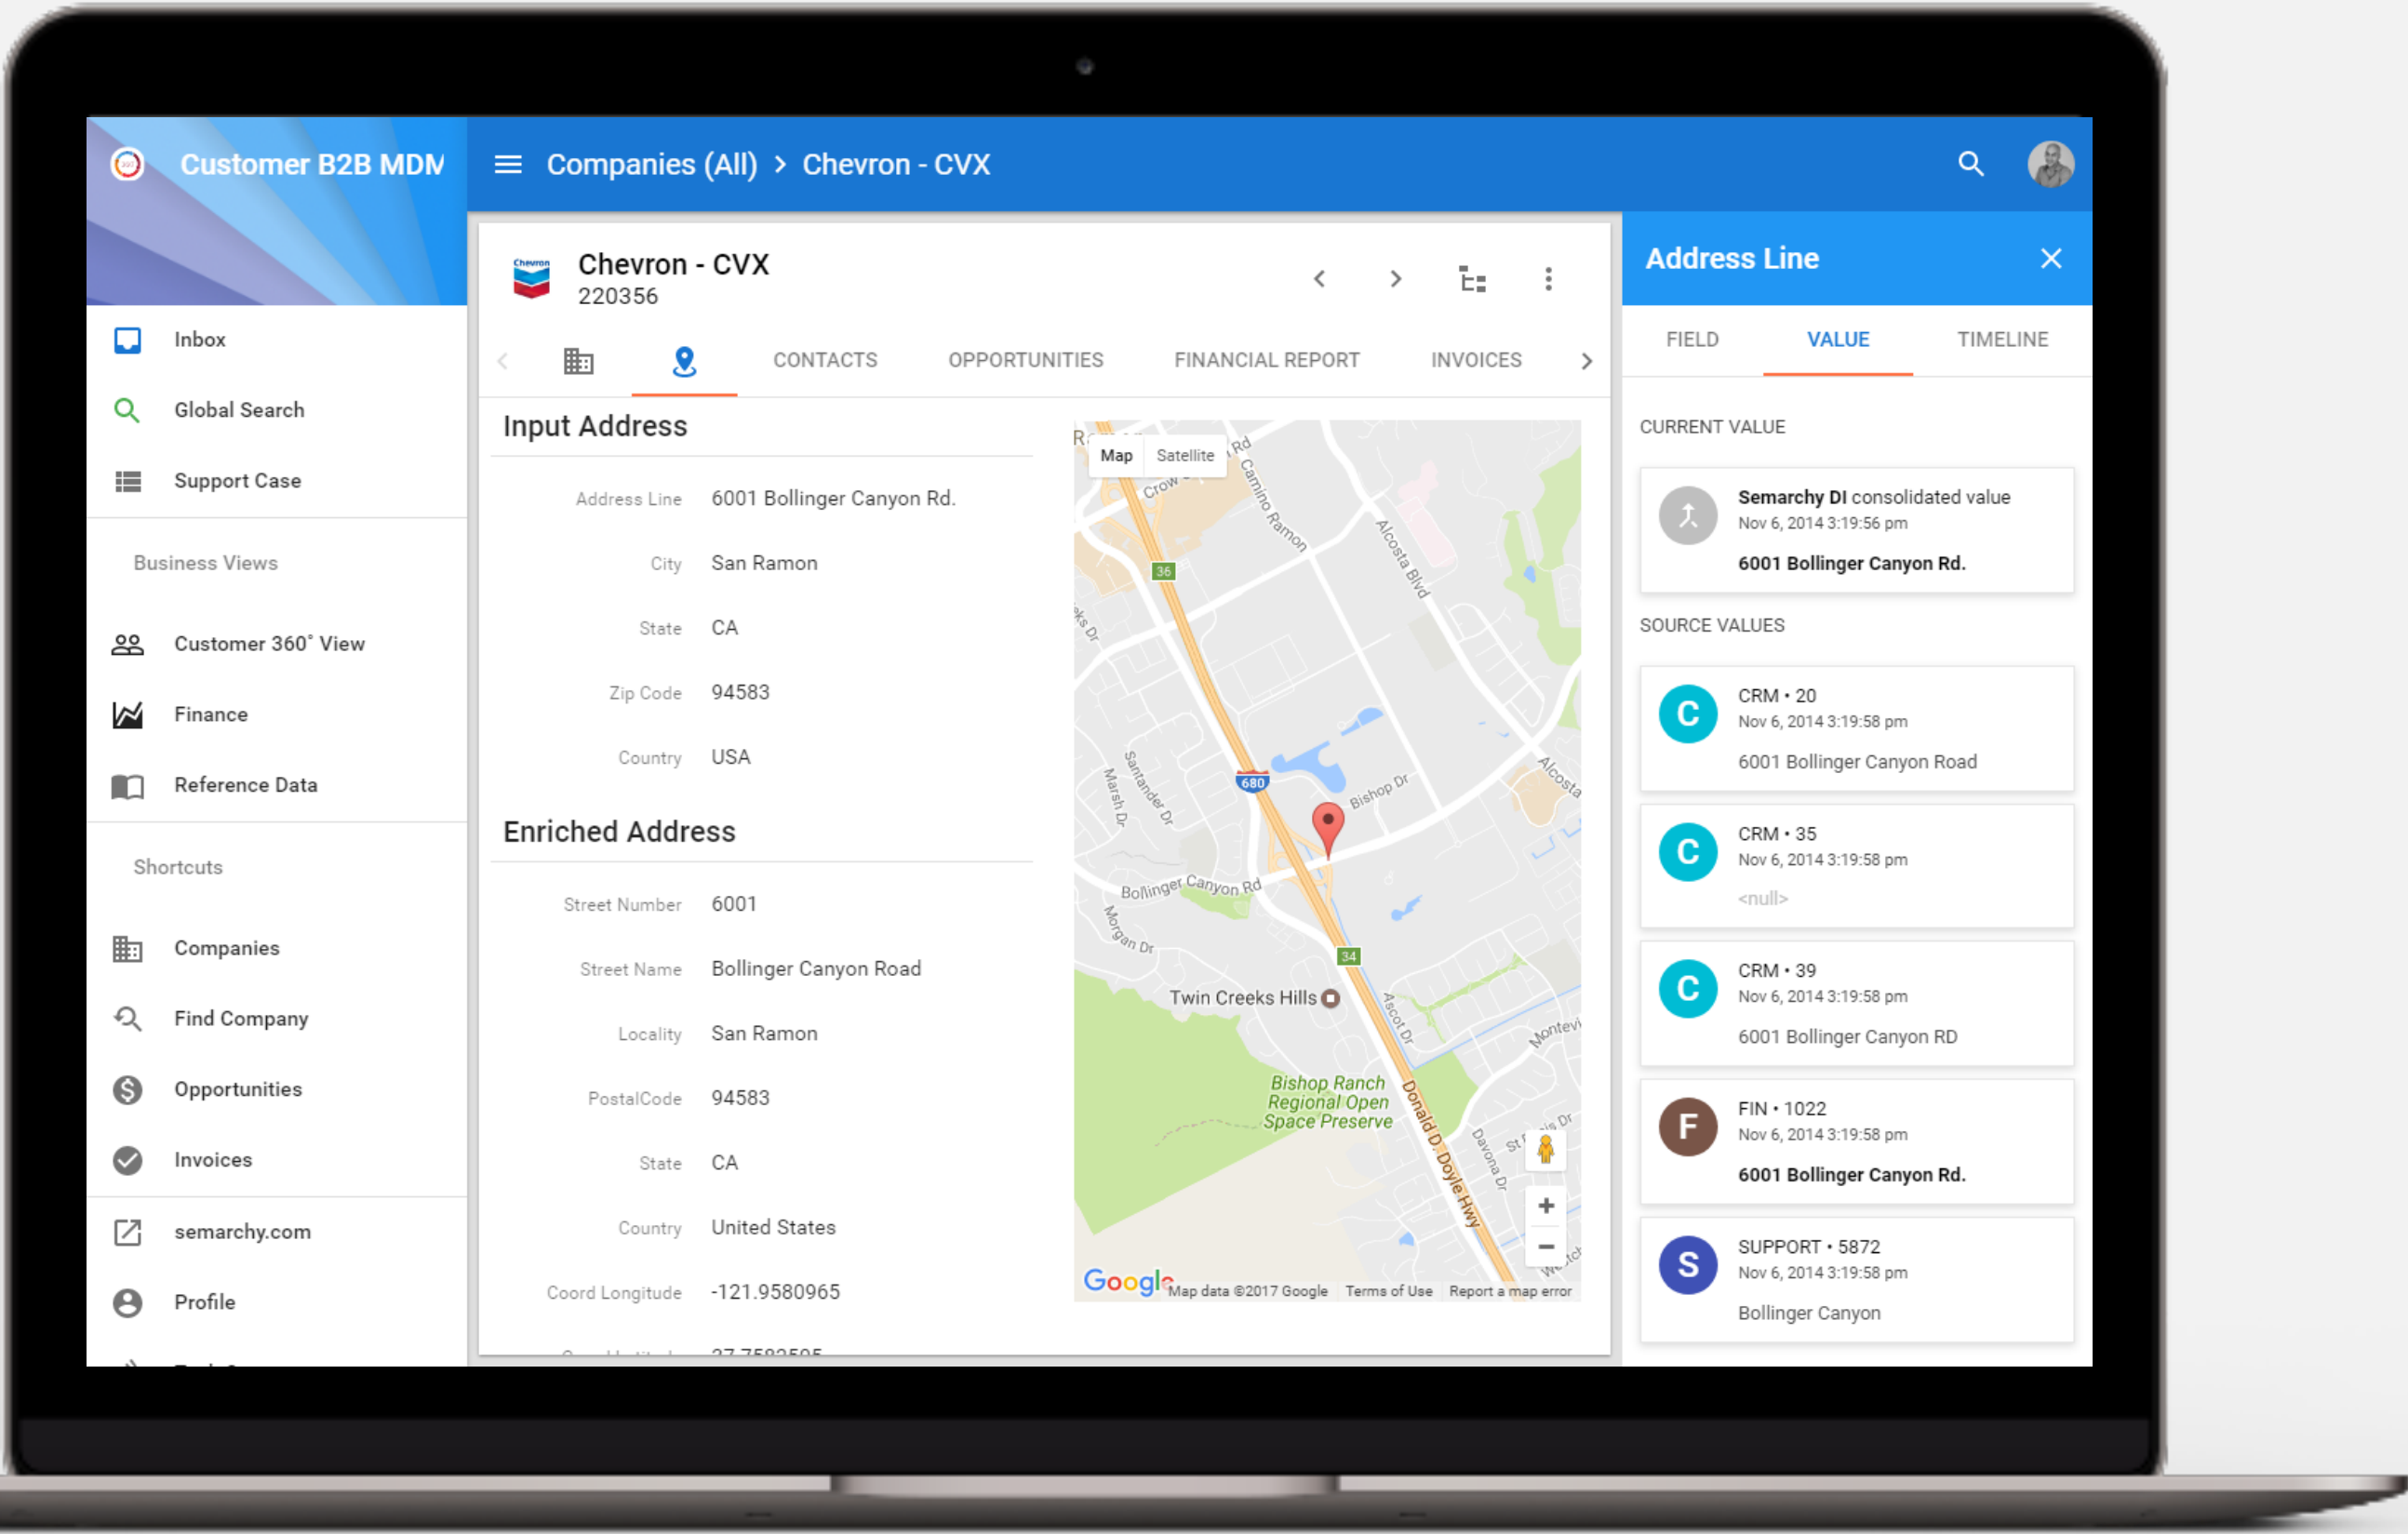

Start Small: Chipotle Restaurants
That’s where the Customers are!

Not served
at Chipotle

Intentions and Iterations: Up and Running Quickly

Let “Data Champions” emerge naturally (hint – they’re the persnickety ones.)

Our Approach
Cloud capable, start easily

Partnership “Big Fish”
Vendor size, cost aligned with value

Flexibility - Master
~~Anything~~ **Anything** useful if used

Train & Deploy
Inventory, Interview, Carrot

How do you know you have a data problem?

Story #1

Fixing the foundation

**When your restaurant
is in the middle of the
Hudson River...**

Close Enough isn't Close Enough: Data Accuracy

Quality is fit for purpose

Customer Experience

Finding the closest Chipotle with accurate information is fundamental

Context

Good data takes effort, and requires to be contextualized

Data Enrichment

Store location was from Real Estate system, i.e. directionally accurate

What we did to address, Starting with our core

Restaurant Master

Integrate 7 loose systems

Minimize disruption

Zero change to business? Some changes?

Implementation

Enterprise model, load, curate, distribute

Measure Impact

Better Customer Experience

The Great Carnitas Shortage of 2015

Story #2

Connect the Operations

Menu Master – Agility & Requirements

Menu Master seems easy...
.. But it's all about intersections

Global Menu Adjustments
Physical Boards & Paper Menus

Ordering platforms
Align all ordering channels (e-com, POS, etc.)

Compliance & Special Adjustments
Once Mastered, easy to address

From menu to location and more: beyond reporting

Build on early wins, keep adding incremental value – one bite at a time!

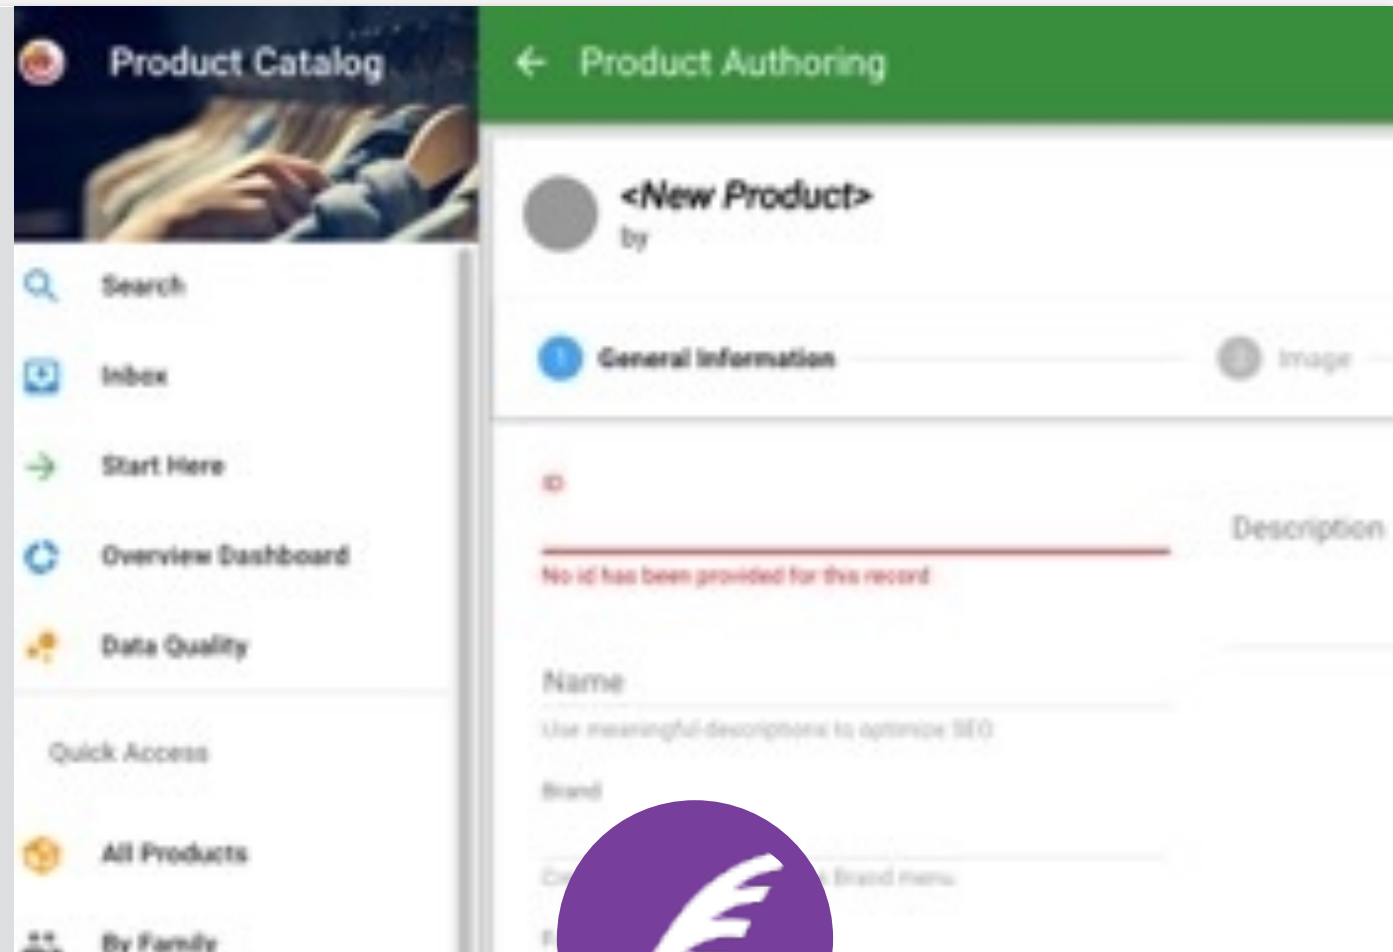

Proactive Decisions

More than reporting; Immediate benefits of menu-location linking

Enterprise Services

Inject reliable, consistent and accurate data to business apps

Guided Authoring

Example where change is needed, new menu items – a better process

MEXICAN GRILL

How to Skip the Line at Chipotle

Story #3

Accelerate & Expand

When you know you've arrived: empowering accountants

Putting real utility in the hands of business users, no App Dev or IT Processors involved

Build a Tax Master

Intersection of accurate geographies and menu

Transform business users into producers

Self-service apps for authoring

Era of the “Data Champion”

Understand business impact (ex: Union Station)

Reduce operational costs

Fewer cooks in the kitchen

What we did to address – power to the (tax) people

Before

Large job to research, understand,
explain, justify

Explain to IT in long prose

IT translate into tech and plan
deployment

Weeks! And used 3-4 departments!

Now

1-2 people

No training

No need to understand databases, IT,
PoS reboot, etc.

Enterprise Services

Here's what we
learned

Conclusions: Here's what we learned

General Guidelines

- Start small
- Demonstrate value (quickly)
- Be flexible (carrot, not stick)
- Do not disrupt “business as usual” (that comes later)
- Evangelize, and again, and again

Unexpected + Benefits

- Business unit involvement, commitment, accountability and pride
- System deprecation & importance
- Separation of concerns per domain

GARTNER DATA & ANALYTICS SUMMIT 2018

LEARN MORE ABOUT INTELLIGENT MDM™
& COLLABORATIVE DATA GOVERNANCE
MARCH 5-8 IN GRAPEVINE, TX

Intelligent Solutions for the CDO

xDM empowers Intelligent MDM™ & Collaborative Data Governance

Smart

Algorithms, Data Table Creation, Micro-services, Automation, Workflows, delegation, etc.

Agile

Intuitive UI, development & UX. Adaptive modeling enables business flexibility

Measurable

Minimally disruptive, fast ROI, **definition and enforcement** of policies/procedures

Chipotle is one of the many successful clients in the Semarchy family

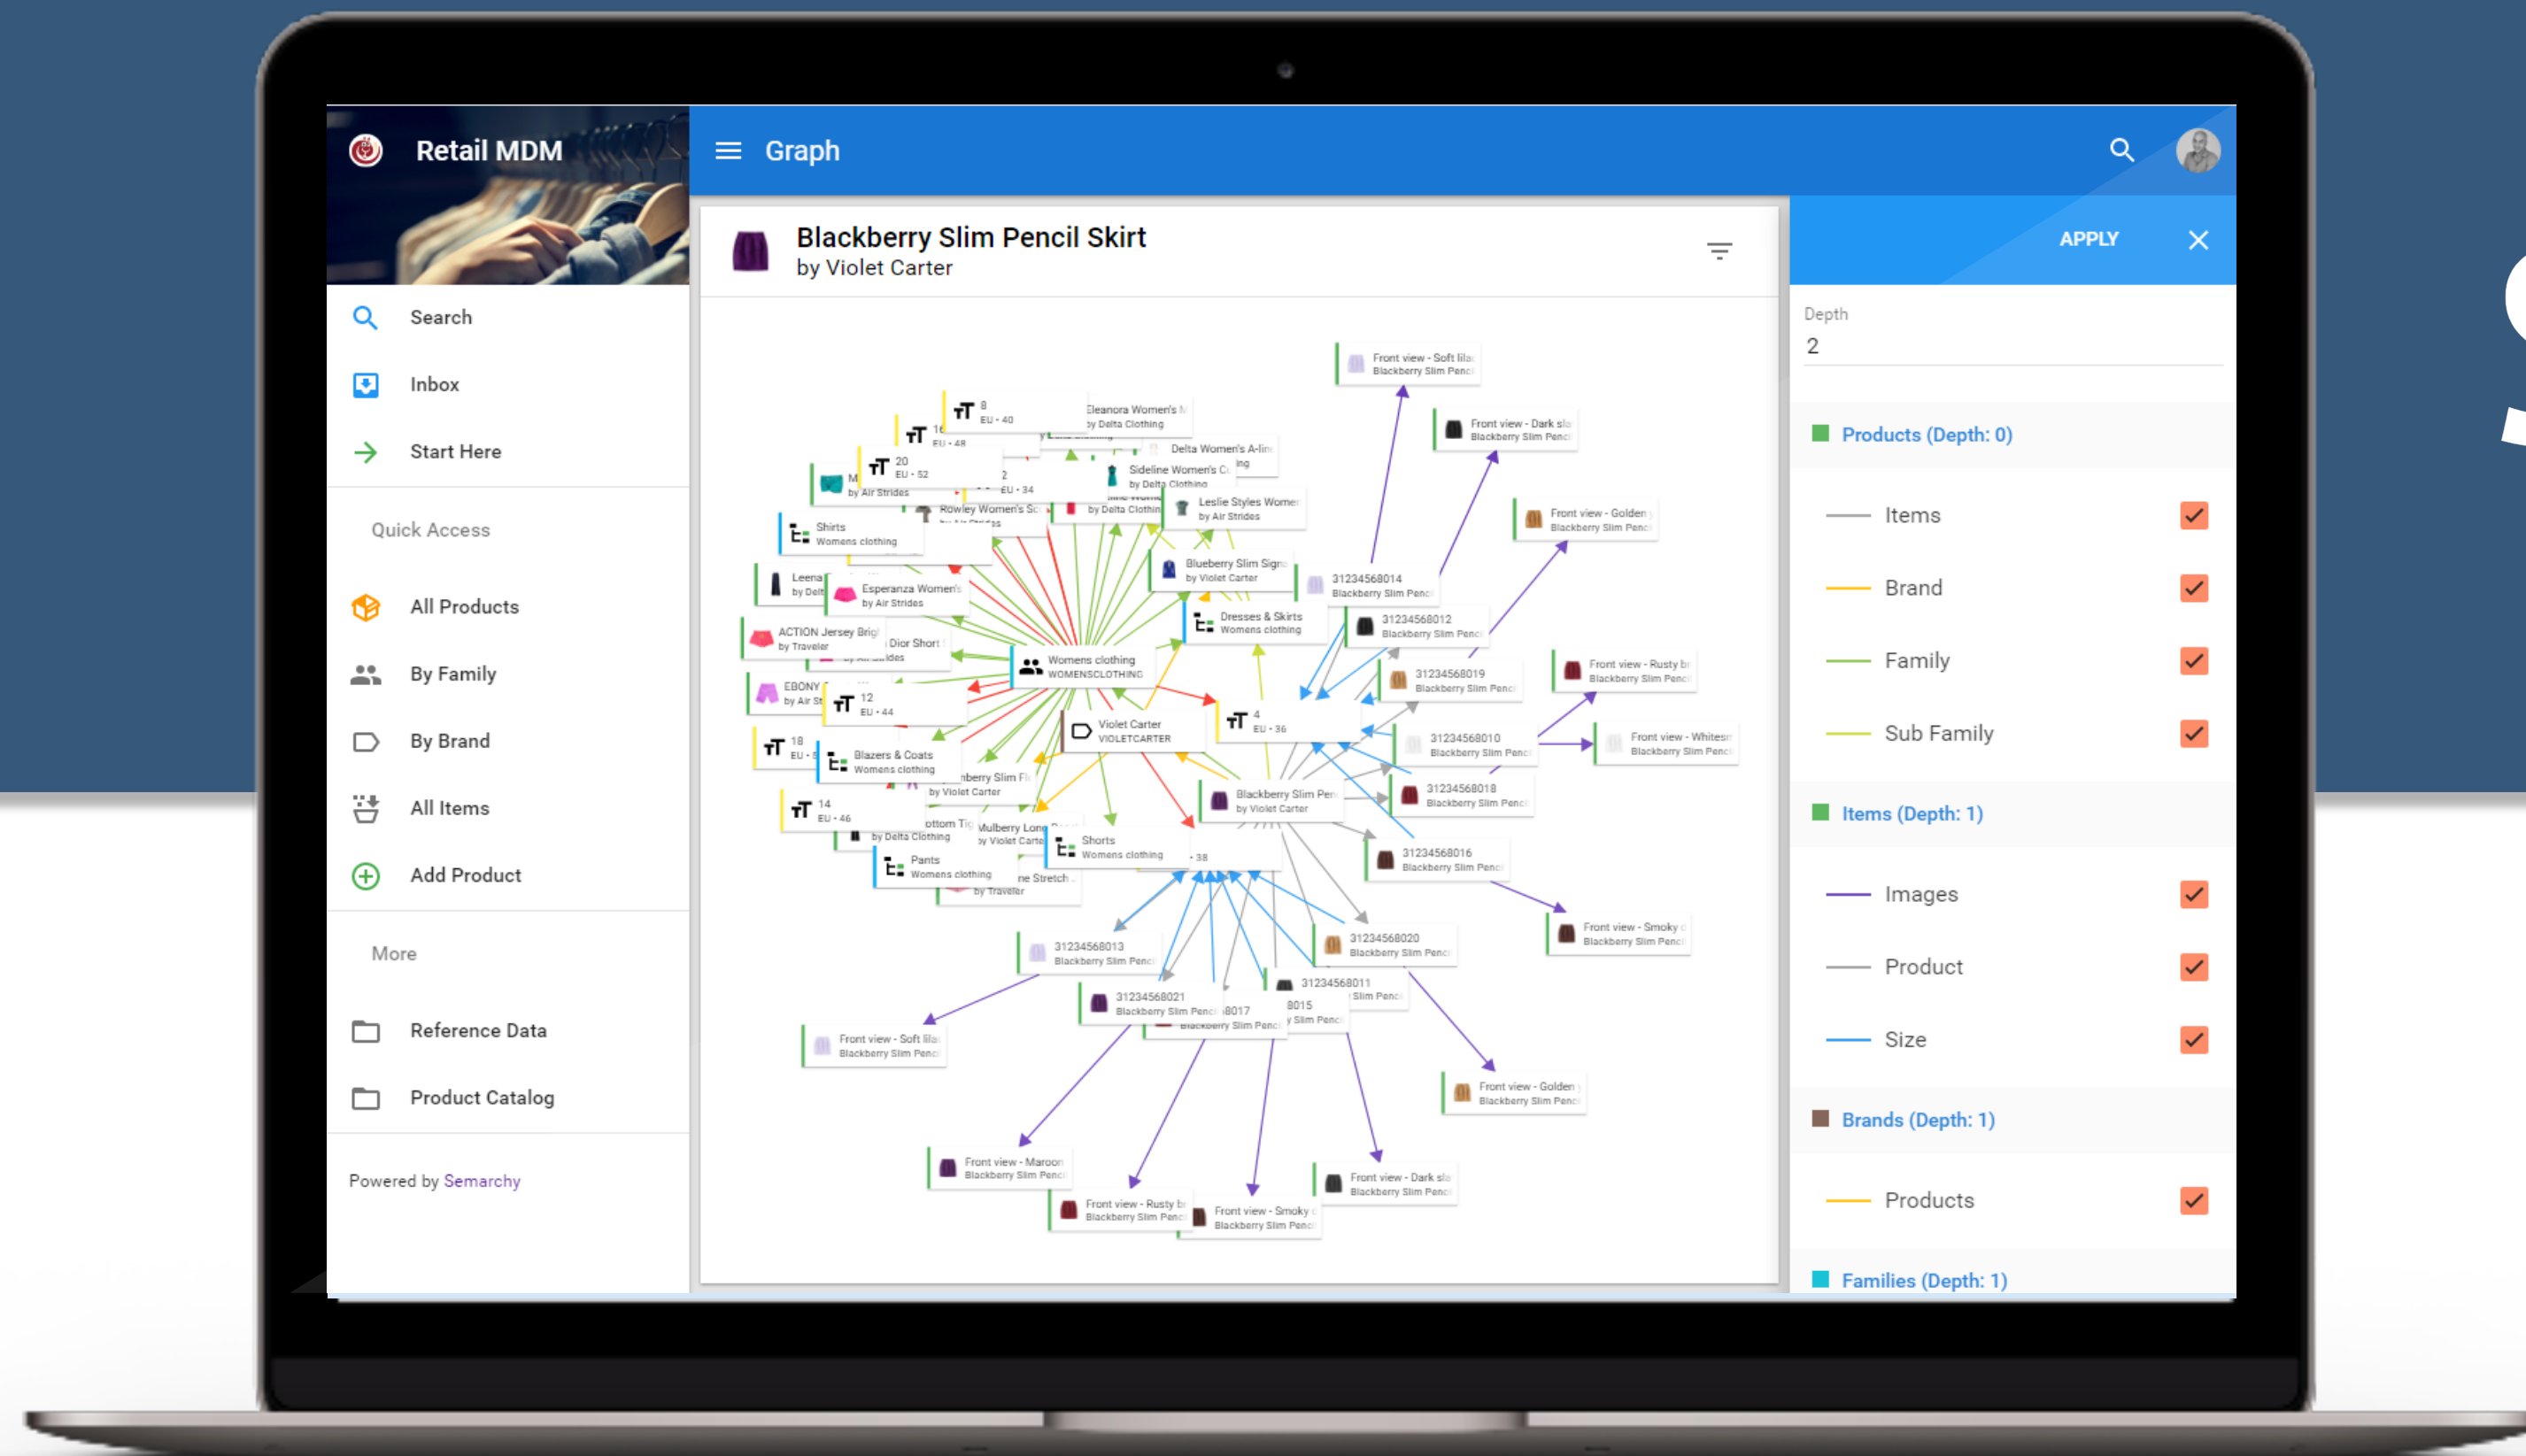

“

80% of Semarchy clients have a fully-functioning solution in less than 10 weeks.

60% have implemented more than one domain

Thank you!
